1)Difference between relative, absolute, mixed cell reference?

Ans :-

- Relative cell
  - Change automatically when copied to another cell.
  - Great for the repeating calculations across rows and columns.
  - Sign = A1
- Absolute cell
  - Remains same no matter where the formula copied
  - Use for tax rate, conversion factors, constant.
  - Sign = A1
- Mixed cell
  - It is a combination of relative & absolute cell reference.
  - Used for multiplication & tables
  - Sign = $A1
